ERCONIA RELEASES NEW PL-5000, ADDS TO THEIR PRODUCT LINE

MESA, AZ – Erconia, the leader in low-level bio-medical lasers announces the release of its latest development, the PL-5000. The PL-5000 marks the third generation of Erconia's low-level laser technology (LLLT). LLLT promotes healing in many conditions by penetrating the skin through photonic absorption; this increases the ATP and activates enzymes in the targeted cells. Laser light energy converts into chemical energy, which initiates a cascade of events at a cellular level, which has been proven to improve cell proliferation and increase endorphin levels to aid in pain relief.

Along with the many upgrades of the PL-5000 from previous versions, Erconia has obtained FDA approval of its lasers to be used in the chiropractic industry. Erconia continues to expand its product line. In addition to offering three versions of the bio-medical laser, they have a patented and patent pending Percussor and Adjuster, also targeted to the chiropractic industry.

Erconia distributes their products through a series of self-sponsored educational seminars conducted nationwide by industry leading chiropractic physicians, such as Dr. John Brimhall, Dr. Rick Amy, Dr. Jeff Spenser, Dr. Don Chu and Dr. Evan Mladenoff.

About Erconia...

Founded in 1996 to advance the art and science of health through the development and distribution of technology through superior bio-medical products. Erconia is dedicated to quality products, service and bettering the quality of life.
